Durarail Proudly Introduces Our New Cable Railing System

Durarail, the powder-coated [aluminum railing](#) specialist, now offers **Cable Railing** - a contemporary deck railing system that provides minimal view obstruction with maximum style. The stainless steel cables allow airflow through the deck and provide excellent resistance to the elements for an attractive, low maintenance railing solution.

[Durarail's](#) powder-coated aluminum top rails and posts provide the ultimate framework for the new **Cable Railing System**. Cleverly designed cable fasteners are hidden within the posts, allowing you to attractively frame the perimeter of your deck with a sleek, clean and modern look that can stand up to the elements and provide many years of functional and esthetic appeal. With a choice of 5 standard *Durarail* Top Rail designs, homeowners can choose the look that most appeals to them.

Available in 8 standard [colors](#) and 180 custom colors, *Durarail* framework is UV resistant and will not peel, flake or blister as it ages so there is no need for sanding, staining or painting.

In addition to its esthetic appeal and [durability](#), **Durarail's Cable Railing System** has other advantages as well. Its stainless steel cables contain at least 65% for recycled content which helps you to qualify for LEED credits.
