

FOR IMMEDIATE RELEASE

NEW EUTRAC® TRACK AND EUTRAC INTELLIGENT TRACK™ PROVIDE OPEN SYSTEMS FOR TRACK LIGHTING

Innovative Systems Offer Increased Application Flexibility, Including Integration with Latest Digital Control Systems

HIGHLAND, NY (April , 2005). . . EUTRAC® Corporation introduces the EUTRAC Track and EUTRAC|DALI Intelligent Track™ systems for the US and Canadian lighting markets. These highly flexible, specification-grade systems of track, track fittings and fixture adaptors are revolutionary in that they provide an open system that can be used in conjunction with virtually any track fixture. As a result, the advanced EUTRAC systems provide increased flexibility and control not previously available in track lighting systems.

According to EUTRAC product manager Christian Fekete, “We are offering EUTRAC track systems as both standard and digitally addressable (i.e. DALI, DMX) solutions that both OEMs and designers/specifiers will appreciate. For manufacturers, EUTRAC systems let them quickly migrate and establish their product offerings for the rapidly expanding track system market. For architects and specifiers, EUTRAC systems provide new application and design versatility as fixtures from virtually any manufacturer can be used on this open system.”

Developed in accordance with rigorous international and UL standards, the attractive EUTRAC track systems are available in black, white and anodized silver. Sleek EUTRAC adaptors feature double-locking systems for the mounting of heavy fixtures. In addition, all EUTRAC track components are low profile, making the technologically sophisticated systems ideal for museum, office and retail applications.

The EUTRAC standard system is configured as 5-conductor, 2-circuit/2-neutral, 20a per circuit. The advanced EUTRAC|DALI digitally addressable system features a 7-conductor, 2-circuit/2-neutral configuration plus a two-conductor low voltage control bus.

Headquartered in Highland, NY, EUTRAC Corporation provides a growing array of standard and digitally addressable-based track system solutions for OEMs and specifiers. For more information about the EUTRAC Track and EUTRAC|DALI Intelligent Track systems, please visit www.eutrac.com or call (845) 691-9030.
