DURADEK ULTRA PLAZADEK—

THE IDEAL SOLUTION TO WATERPROOFING UNDER PAVERS AND DUCK BOARDS

SURREY, BC (June 15th, 2010) - There seems to be a trend towards many of the higher priced houses using pavers or duck boards as the deck finish over living space. The walking surface provides the visual part but the real important work is done by the waterproof membrane. Duradek's Ultra PLAZADEK is the ideal choice to protect the building owner's investment.

Since 1974, Duradek PVC membranes have been used to waterproof decks, balconies and roof decks. Well over a hundred million square feet of Duradek has been installed all over North America and it has proven itself to be a durable, attractive and relatively maintenance free waterproofing system.

Duradek Ultra PLAZADEK is a "model" of Duradek Ultra designed specifically for a paver or duck board overlay.

What makes Duradek Ultra PLAZADEK different from the alternatives...

- PLAZADEK is installed by trained applicators, so you have the peace of mind knowing the installation is professionally done.
- PLAZADEK is an approved roofing membrane, so the structure below does not incur expensive water damage.
- PLAZADEK has a manufacturers 10 year warranty on waterproofing.
- PLAZADEK has many options for perimeter details, so you can choose the look of your finished project.

Duradek Ultra PLAZADEK is produced by Duradek, the original waterproofing sheet vinyl that has been solving unique waterproofing problems throughout North America for over 35 years. With the same roofing approvals, the same proven installation techniques, and the same network of professional and trained applicators, Duradek Ultra PLAZADEK is the ideal choice for a roofing approved waterproofing membrane.
