

Canadian Distributor**Thames Valley Brick & Tile**

Thames Valley Building Products Ltd
Burlington, ON

Product Description

DISTRIBUTORS FOR ENDICOTT CLAY PRODUCTS
AND STARK CERAMICS

Thames Valley Brick & Tile is a Canadian supplier of quality architectural clay brick and structural tile products from across North America, representing such manufacturers as Endicott Brick and Stark Ceramics.

Product Line

FACE BRICK (top and middle photos): Endicott face brick is available in a myriad of custom shapes and textures. They feature "Authentic Ironspot" colours and are recognized throughout North America for their unmatched elegance, versatility and durability.

Seventeen sizes (in both hard metric and Imperial), are available, including Modular, Norman, Closure, Utility (Jumbo) and Triple Brick. Face brick features smooth, velour, artisan and heritage textures, and over 30 colours, with matching paving brick, paver step-tread, pool coping, paver tile and thin-brick.

GLAZED WARE: Endicott offers a rainbow of "Ceramic-Glazed" colours (16 standard) in face brick, tile or thin brick. Several clear "Ceramic-Glazes" (generally used as an anti-graffiti surfacing) are also available, as are glazed trim units, shapes and other sizes (by special order). Glazed Ware suits a myriad of wall system applications, such as coordinated or contrasting banding patterns and intricate designer accents.

CUSTOM BRICK SHAPES AND MURALS: Endicott offers custom services to assist in the design and production of hand-crafted Face brick murals and custom brick shapes.

STARK CERAMIC-GLAZED BRICK MASONRY (bottom photo): Units offer unique glazes and shapes for any building design. The Millennium Collection for exteriors is a series of large-scale glazed brick featuring a high-gloss glazed finish, kiln-fired to over 2000°F (1093.3°C) during manufacture, guaranteed to retain colour and provide long-term durability. Units also provide a variety of design options with single and multiple scoring.

STARK INTERIOR CERAMIC-GLAZED BRICK MASONRY: Units meet or exceed the requirements of ASTM C126-99 for imperviousness, resistance to fading and crazing, zero flame spread, zero smoke developed and resistance to scratching. Ideal for high-use applications, the products meet FDA standards for cleanability and imperviousness and are available with a full selection of trim pieces.

Both the Stark Ceramics exterior and interior ceramic masonry series are available in 20 standard ceramic-glazed colours, with a rainbow of custom and distinctive accent colours available.
