

Canadian Distributor

Thames Valley Brick & Tile

Thames Valley Building Products Ltd
Burlington, ON

Thames Valley Brick & Tile is a Canadian supplier of quality Architectural Clay Brick from across North America, representing such manufacturers as Summitville, Marion and Endicott.

Product Description, Applications

THIN-BRICK

Kiln-fired Thin-Brick Facing possesses all the durability and beauty of full-size clay face brick when building design or other considerations may not permit the use of standard "laid in place" brick masonry, yet when installed, maximizes space; cuts costs; weighs considerably less; and speeds jobsite construction time by allowing off-site pre-fabrication of wall sections using pre-cast and panelized systems, with a proven record of performance.

Product Line

SUMMITVILLE THIN BRICK® (top photo): Made from select fire-clays and shale chosen for their fired strength and proven service characteristics. Eighteen colour blends and shades are available, as are brick corners, edge caps and angles. Conforms to ASTM C1088-03, Type TBX.

MARION CERAMICS VEE BRICK (middle photo): Marion Ceramics manufactures a thin veneer brick (9/16" thick) called Vee Brick. in 14 attractive colors. Vee Brick is extruded under high vacuum and hard fired to produce high quality dense products. The finest clays, shale and other raw materials are fine ground to produce its smooth wire-cut texture. The colour palette offers the look of traditional residential brick, as well as a spectrum of architectural clear tones for commercial and institutional projects.

ENDICOTT THIN BRICK (bottom photo): Ideally suited to year-round commercial, residential and remodelling applications. It may be applied over any structurally sound substrate, with no footings or supports required, or can be used as a Brick-Facing, "embedded" in a pre-cast concrete wall panel. Over 16 standard colours and six textures are offered, including Endicott's "Authentic Ironspots". All necessary trim units are available. Tested to ASTM C1088-03, Type TBX.

For brick-faced pre-cast concrete wall panels. A specially designed "keyback" configuration makes for a natural marriage between the desired look of "laid in place" Clay Face-brick and the practicality of pre-cast panels. Endicott Thin-Brick (with full corners and trim pieces), used along with custom-made pre-cast formliners, is not limited to "standard" concrete finishes. The kiln-fired thin-brick "embedded" in the pre-cast panel possesses the durability and elegance of full bed face-brick, while maximizing space and minimizing weight. Available in a full array of "Ironspot" colours, textures and sizes, in combinations to suit any design.
