

STATEMENT OF RECYCLED MATERIAL

CycleSafe, Inc. is dedicated to reducing carbon footprint globally through implementing environmentally sustainable manufacturing practices. We follow ISO 14000 environmental standards that require continuous improvement and reduction of waste.

Our products are designed and engineered for extended product life and can be reassembled or reused as site requirements demand. We choose materials for durability, strength and non-corrosive factors that maintain our quality standards and do not require replacement.

A recycled-content product is an item that contains recovered materials. A product does not have to contain 100 percent recovered materials to be considered “recycled,” however the higher the percentage of recycled content, the greater the amount of waste that is diverted from disposal. Recycled-content products may contain some pre-consumer waste, some post-consumer waste or both.

PRE-CONSUMER CONTENT is material that is recovered and reused, during the manufacture of the part, that is not delivered as a finished product.

POST-CONSUMER CONTENT is material that is recovered from a product after it has served its intended use. Instead of being disposed of it is reclaimed for use in a different product.

CYCLE SAFE BICYCLE LOCKERS

ProPark

Pre-Consumer Content	=	4.6%
Post-Consumer Content	=	6.4%
Total Recycled Content	=	32%

EcoPark

Pre-Consumer Content	=	10.2%
Post-Consumer Content	=	14.1%
Total Recycled Content	=	70%

CYCLE SAFE BICYCLE SHELTERS

Pre-Consumer Content	=	10%
Post-Consumer Content	=	16%
Total Recycled Content	=	13%

CYCLE SAFE BICYCLE RACKS

Pre-Consumer Content	=	9-14%
Post-Consumer Content	=	16%
Total Recycled Content	=	25-30%
